

BRootForce, A Developer's Hackathon

ACM@CCET student chapter organised a developer's hackathon, **BRootForce**, on 1st April 2017. The event was a battle of the best. The top 10 teams from **Codathon 3.0** (<https://hackerearth.com/codathon-3-0>) were eligible for BRootForce.

A total of 20 students from various colleges of **tri-city** turned up for the event. The event was hosted on the online platform **HackerEarth** with the link <https://brootforce.hackerearth.com> and the students had to develop software on any one of the five given themes.

The themes provided were interesting and designed to test the application of the knowledge the students had gained in the classroom. The **themes** covered various trending topics in Computer Science like **Socket Programming, Mobile Application, Digital Image Processing, Artificial Intelligence** and **Cryptography**. The participants were equally excited to take up the challenge.

In the end, **Dr. Sunil K. Singh**, HoD of CSE Department, gave a technical-cum-motivational talk to the students and the students left the college in high spirits; having tested their knowledge for once and then gained some more from the talk.

Some Glimpses of the Event
